Summary

Interdisciplinary researcher specializing in **thermal management of high-power-density electronics**, and **electrical-thermal co-design of advanced semiconductor packaging**. Doctoral research focused on silicon-embedded liquid cooling of ultra-high power density (> 1 kW/cm^2) electronics using manifold microchannel coolers. Highly experienced in hands-on experiments, including single/two-phase flow loop testbed and cleanroom fabrication of semiconductor packaging, along with expertise in modeling and optimization using computational fluid dynamics (CFD) simulation. **Author of nine publications** in peer-reviewed journals and conferences, including **seven lead-author papers**.

Research interests

Silicon-embedded liquid cooling of high-power-density electronics

Electrical-thermal co-design for advanced electronics packaging

Thermal management of three-dimensional integrated circuits (3D-ICs)

Professional Experience

Georgia Institute of Technology Atlanta, GA, United States

Postdoctoral Fellow (On-site, 100% appointment) *Apr. 2025 – Present*

- Postdoc at Integrated 3D Systems (I3DS) group in the School of Electrical and Computer Engineering (Advisor: Prof. Muhannad S. Bakir)
- Support research and development in the areas of advanced semiconductor packaging and heterogeneous integration, including advanced cooling, 2.5D and 3D IC technologies, and new interconnects architecture

Semiconductor Research Corporation (SRC) Atlanta, GA, United States

Research Scholar *Sep. 2025 – Present*

- Research scholar in SRC/DARPA JUMP 2.0 CogniSense (Center on Cognitive Multispectral Sensors) program
- Develop an electrical-thermal co-functional copper bridge monolithically integrated into 3D RFIC-antenna packages (see Research Projects [R6], and Honors & Awards)

Education

Korea Advanced Institute of Science and Technology (KAIST) Daejeon, South Korea

Ph.D Mechanical Engineering *Mar. 2020 – Feb. 2025*

- Dissertation Title: Embedded liquid cooling with manifold microchannel for ultra-high heat flux electronics (Advisor: Prof. Sung Jin Kim)

M.S. Mechanical Engineering *Mar. 2018 – Feb. 2020*

- Thesis Title: Optimal thermal design of pin-fin heat sinks with variable fin density in natural convection (Advisor: Prof. Sung Jin Kim)

B.S. Mechanical Engineering *Mar. 2013 – Feb. 2018*

- Honors: First prize in *International Cooperative Design* (Advisor: Prof. Jeong-Hoi Koo at Miami University) (2015), First prize in *Multidisciplinary Capstone Design* (2017)

Research Projects

[R8] **Next Generation Microelectronics Manufacturing (NGMM)** Jan. 2026 – Present

Sponsored by DARPA, USA and Texas Institute for Electronics (TIE) *PI: Prof. Muhannad S. Bakir*

- Developing 3D heterogeneous integration (3DHI) platforms for RF/mmWave systems, encompassing thermal architecture design as well as fabrication and assembly process development.
- Developing advanced microfluidic cooling technologies with the potential for practical adoption within U.S. domestic R&D infrastructure for the fabrication of 3DHI microsystems.
- Serving as the sole researcher at Georgia Tech responsible for thermal management technologies and microfluidic cooling solutions within the project.

[R7] **Enhanced 2.5D and 3D Integrated Technologies for High-Performance Electronic Systems** Apr. 2025 – Present

Sponsored by Air Force Research Laboratory (AFRL), USA *PI: Prof. Muhannad S. Bakir*

- Conducting thermal modeling, fabrication, and experimental characterization of microfluidic cooling platforms for high-power-density RF/mmWave electronic systems.
- Developing a liquid-cooled RF measurement platform for simultaneous thermal-hydraulic and RF characterization, including chip temperature distribution measured by infrared (IR) thermography, pressure drop and flow rate measured by transducers, and RF performance (e.g., S-parameters) measured using a vector network analyzer (VNA).
- Mentoring students on thermal aspects of advanced electronic packaging, including numerical simulation, cleanroom fabrication, and bonding technologies.

[R6] **Electrical-thermal co-design of a heterogeneous integration platform for 3D RFIC-antenna packages** Sep. 2025 – Present

Sponsored by Semiconductor Research Corporation (SRC), USA *PI: Prof. Muhannad S. Bakir*

- JUMP 2.0 CogniSense Program (Thrust 4: Heterogeneous System Integration)
- Proposed an electrical-thermal co-functional platform for 3D RFIC-antenna packages comprising (1) monolithic copper interlayer serving as electrical ground plane and heat spreader, and (2) copper pillar interconnects for ultra-low insertion loss.
- Fabricated and assembled a test vehicle comprising glass tier with antenna and through-glass-via (TGV), and silicon RFIC tier bonded by Cu-Cu thermocompression bonding.

- Conducted electro-thermal simulations using ANSYS. From an electrical perspective, achieved interconnect insertion loss below 0.5 dB at 170 GHz. From a thermal perspective, demonstrated that a 30 µm copper interlayer acts as an effective heat spreader, maintaining junction temperatures equivalent to external bulky copper heat sinks (∼cm scale) while reducing package volume by over 10×.

[R5] **Manifold microchannel cooling system for ultra-high heat flux applications** Mar. 2021 – Feb. 2025
Sponsored by National Research Foundation of Korea (NRF) *PI: Prof. Sung Jin Kim*

- Developed a thermal-hydraulic model to predict the thermal resistance and flow non-uniformity of a manifold microchannel heat sink (see reference [J4])
- Developed a MEMS fabrication process for silicon-based/glass-based embedded manifold microchannel heat sinks
- Experimentally demonstrated embedded cooling for a heat flux of 1.2 kW/cm^2 without phase-change heat transfer, with a pressure drop of less than 5 kPa at a junction temperature of 110°C (see reference [J3])

[R4] **Design & electric/thermal/material analysis of 3-D PIM-HBM architecture** Mar. 2023 – Feb. 2025
Sponsored by National Research Foundation of Korea (NRF) *PI: Prof. Sung Jin Kim*

- Developed a compact thermal model of PIM heterogeneous packages for thermal reliability verification
- Developed through-silicon via (TSV) embedded manifold microchannel and co-analyzed electrical and thermal performances

[R3] **Electro-thermal co-design of silicon-based optical phased arrays with tunable radiator for energy-efficient beam steering** Mar. 2022 – Feb. 2025
Sponsored by National Research Foundation of Korea (NRF) *PI: Prof. Hamza Kurt*

- Developed an energy-efficient thermo-optic control for longitudinal beam steering in silicon-based optical phased arrays (OPAs) with tunable radiators (in collaboration with Prof. H. Kurt and Prof. H.-H. Park (KAIST)) (see reference [J2])
- Proposed and optimized the backside air trench structure, successfully doubling the energy efficiency of the OPAs compared to the benchmark

[R2] **Loop heat pipe heat exchanger for waste heat recovery of LNG re-gasification process** May 2021 – Oct. 2021
Sponsored by HD Korea Shipbuilding and Offshore Engineering Co., Ltd. *PI: Prof. Sung Jin Kim*

- Proposed a loop heat pipe heat exchanger (LHP-HX) to recover cold energy from liquefied natural gas (LNG) re-gasification process, as an alternative to the conventional pump-assisted active system
- Determined the design parameters of a 500 kW-scale LHP-HX using epsilon-NTU method (presented the results at *The 2nd Asian Conference on Thermal Sciences (ACTS)* — refer to [O3])

[R1] **Weight reduction of 5G MMU station via advanced thermal management** Oct. 2019 – Oct. 2020
Sponsored by Network Business Division, SAMSUNG Electronics *PI: Prof. Sung Jin Kim*

- Proposed and optimized a pin-fin heat sink with a variable fin population, achieving a 30% weight reduction while maintaining the thermal performance (see reference [J1])
- Embedded a passive cooling device—a pulsating heat pipe—into the base substrate, and experimentally demonstrated an effective thermal conductivity of 4000 W/m·K and achieved a 24% weight reduction of the base substrate

Honors & Awards

Best Poster Award (SRC/DARPA JUMP 2.0 CogniSense Annual Review) Oct. 2025
Issued by Semiconductor Research Corporation (SRC)
An honor voted on by industry experts from companies such as Intel, Raytheon, IBM, and Micron, and awarded to fewer than 5% of researchers participating the program (5 out of ∼120).

National Excellence Scholarship Mar. 2020 – Feb. 2025
Full-Tuition Scholarship for Doctoral Program, Ministry of Education, South Korea

KAIST Scholarship for Academic Excellence Mar. 2018 – Feb. 2020
Full-Tuition Scholarship for Master Program, KAIST

National Excellence Scholarship Mar. 2013 – Feb. 2018
Full-Tuition Scholarship for Undergraduate Program, Ministry of Education, South Korea

Professional Activities

Invited reviewer refer to ORCID record

- Completed **54 peer reviews** across **7 international journals**

Membership

- Member - Institute of Electrical and Electronics Engineers (IEEE) (link)
- Member - IEEE Electronics Packaging Society (link)

Teaching

Served as a teaching assistant for the following courses, grading exams and quizzes. Held office hours to address student questions and actively supported students in understanding the course material.

[TA] Convective Heat Transfer (ME611)	2023
[TA] Thermodynamics (ME211)	2023
[TA] Heat Transfer (ME321)	2022
[TA] Phase Change Heat Transfer (ME514)	2022
[TA] Fluid Mechanics (ME221)	2020, 2021
[TA] Mathematical Methods in Mechanical Engineering (ME500)	2020

Skills

Experiment
Construction of single/two-phase flow loop testbed, MEMS fabrication techniques (etching, anodic bonding, direct fusion bonding, sputtering etc.), IR thermometry, Material characterization (FE-SEM, TEM, EDS, XRM, XPS, FT-IR etc.)

Numerical Modeling and Optimization
Computational fluid dynamics (ANSYS Fluent, COMSOL Multiphysics), Reduced-order modeling (ROM), Data-driven optimization, Surrogate-model-based optimization (multi-fidelity Kriging method etc.)
